

A PCA plot showing the first two principal components, PC1 (x-axis) and PC2 (y-axis). The x-axis ranges from -4 to 8, and the y-axis ranges from -4 to 4. Data points are colored by group: pink, light blue, light green, yellow, orange, red, purple, dark blue, brown, and grey. A yellow star with a black outline is positioned at approximately (3.2, 0.5), highlighting a specific sample within the pink cluster.

A PCA plot showing the relationship between PC1 (x-axis) and PC2 (y-axis). The x-axis ranges from -4 to 8, and the y-axis ranges from -4 to 4. A dashed horizontal line is drawn at PC2 = 0, and a dashed vertical line is drawn at PC1 = 0. The data points are colored circles, with a yellow star highlighting a specific point at approximately (3.2, 0.8). The points are clustered into several groups, showing a general positive correlation between PC1 and PC2.

A PCA plot showing the relationship between PC1 (x-axis) and PC2 (y-axis). The x-axis ranges from -4 to 8, and the y-axis ranges from -4 to 4. A dashed horizontal line is drawn at PC2 = 0, and a dashed vertical line is drawn at PC1 = 0. The data points are colored circles, with a yellow star highlighting a specific point at approximately (3.2, 0.8). The points are clustered into several groups, showing a general positive correlation between PC1 and PC2.
