

African Colonial History Analysis: Data Limitation

CRITICAL DATA LIMITATION:

All British-colonized African countries in our dataset only have English (en-native) language data. They lack native language data (Swahili, Yoruba, Akan, Zulu, Shona, Bemba, etc.).

IMPACT:

The English advantage metric requires BOTH English and native language data:

$$\text{English Advantage (\%)} = 100 \times (\text{Distance_native} - \text{Distance_english}) / \text{Distance_native}$$

Without native language data, we CANNOT calculate English advantage for British-colonized African countries, preventing us from testing the colonial hypothesis in the African context.

RECOMMENDATION:

This should be acknowledged as a methodological limitation. Future work should collect native language data for these countries to enable proper colonial history analysis in Africa.

Data Availability for British-Colonized African Countries:

Kenya: [OK] Data found, [X] Native language
Nigeria: [OK] Data found, [X] Native language
Ghana: [OK] Data found, [X] Native language
South Africa: [OK] Data found, [X] Native language
Zimbabwe: [OK] Data found, [X] Native language
Zambia: [OK] Data found, [X] Native language
