

A PCA plot showing the first two principal components, PC1 (x-axis) and PC2 (y-axis). The x-axis ranges from -4 to 8, and the y-axis ranges from -4 to 4. Dashed lines represent the PC1=0 and PC2=0 axes. The data points are colored and clustered into several groups. A yellow star marks the origin (0,0). Two large circles highlight specific points: a green circle at approximately (2.1, 2.1) and a red circle at approximately (2.9, 2.1). Other smaller circles of various colors (blue, yellow, cyan, pink, purple, green, grey) are scattered throughout the plot, representing different clusters or individual data points.

A PCA plot showing the first two principal components, PC1 (x-axis) and PC2 (y-axis). The x-axis ranges from -4 to 8, and the y-axis ranges from -4 to 4. Dashed lines represent the PC1=0 and PC2=0 axes. The data points are colored and sized to represent different categories. A yellow star marks the origin (0,0). Two large circles highlight specific points: a green circle at approximately (2.1, 2.1) and a red circle at approximately (2.9, 2.1). Other points are colored in shades of blue, yellow, green, pink, and grey, with sizes varying from small to large.
