

A scatter plot with a white background and a black border. The x-axis is labeled from -4 to 8 with major ticks at -4, -2, 0, 2, 4, 6, and 8. The y-axis is labeled from -2 to 6 with major ticks at -2, 0, 2, 4, and 6. Dashed grey lines represent the x=0 and y=0 axes. A yellow star with a black outline is located at approximately (0.2, -0.5). Numerous data points are scattered around this star, each represented by a semi-transparent colored circle with a black outline. The colors include blue, orange, green, red, purple, cyan, brown, pink, and grey. The points are most densely clustered near the star and become sparser as they move away from the center. Some points are outliers, such as a blue point at approximately (-0.5, 5.5) and a pink point at approximately (4.5, 4.5).
